

Observations

1. Firstly, Charter Schools were the best performing schools with good reading and math scores. On the other hand, it's important to notice that district schools were not performing as well as charter schools.
2. Also, based on the math scores and reading scores for students in grades 9th, 10th, 11th and 12th, we can see that students on average, had better reading scores. So, it would be better if these district schools focus on raising the students' math scores.
